

# This can eliminate ploughing!

## Visit the Plant Protection demonstration plots at the Royal Show

I.C.I. research has made possible many new approaches in agriculture. The advanced technique of ploughless farming is only one of many that is revolutionising traditional practices and that will be demonstrated by Plant Protection at the Royal Show (July 6-9).

Make a special point of seeing—Grassland renovation, without ploughing; Ley renewal, without ploughing; Stubble cleaning; Round-the-farm weed control; Chemical screening in forestry and weed control in row crops—with 'Gramoxone' W and 'Preeglone' Extra.
