with

GRAMOXONE W

for pasture renovation without ploughing

There are millions of acres of unproductive pasture which, up to now, farmers have thought it impossible to renovate. It would have been too expensive, or would have involved a long-term programme. Now,

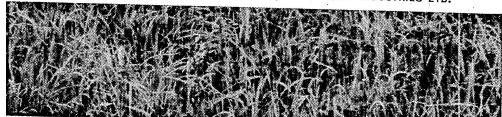

'GRAMOXONE' W has altered the picture.

With 'Gramoxone' W, land can be quickly and easily renovated *without the plough*. 'Gramoxone' W has special and unique properties which make it ideal for pasture renovation: it kills off unwanted annual and tufted perennial grasses; it acts quickly; it is inactivated on contact with the soil; it leaves no residue; it is unaffected by rain. Now, you can get more from your grass. You can increase the productivity of your pastures—increase your profits. This is possible with 'Gramoxone' W. Ask your Plant Protection Representative about 'Gramoxone' W now.
